

Welcome to the Future Health Poster Project. If you are on a healing journey, or seek information about how mankind developed its various health systems, this is the place to be!

The symbol you see on this page appeared in June 1991 near Hill Fort of Barbury Castle, in the UK. It arrived with a bang in numerous ways. First, it was a major transition from the non-connected circles that had been growing in size and number for years in the UK. Second, it was made at night as most pictograms are, but most of the local residents were awakened by a thunderous roar in the sky! Its total border area encompasses 12,000 square yards, and the sum of all 4 circles exactly equals 31,680 square feet. This number in numerology is supposedly the number of God. For instance, the circumference of the sublunary world is said to be 31,680 miles. Some Christian scholars feel 3168 is the numerical symbol of Jesus. At the very least the tetrahedral shape viewed in the two-dimensional plane can easily represent the three-fold nature of God. Numerous religions have used this shape, from Hinduism to the Rosicrucians, sometimes with uncanny similarity to the Barbury castle image. As the science unravels the religious/philosophical, this symbol has perhaps generated the most profound understanding of how matter moves from one dimension to the next.

At the same time this image was cast in the fields, I was working up a genealogy study of the world's healing arts. The complexity of the task necessitated a simple symbol be used to display the data. I drew and worked with some interconnected triangles that same summer, but was stunned when I saw the Barbury tetrahedron for the first time a few months after its creation. It was exactly what I was trying to create! I quickly drew it out on a large piece of paper, and like a madman filled in hundreds of healing methodologies in under 30 minutes! The symbol was perfect for the way mankind had developed healing arts throughout history. The finished poster was finally in print by 1994. It is designed to be dynamic and grow with our deeper understanding of how the body works both physically and spiritually. But after all, isn't the body the perfect manifestation of a form of energy, waiting to move to a higher dimension?

TECHNICAL ASPECTS OF FUTURE HEALTH POSTER PROJECT

Printed by five-color 200 line screen on 80 pound cover paper. The 22" x 28" size will hang photographic crisp with or without a frame. The durable aqueous finish eliminates the need for glass cover. If glass is used in framing, it should be non-reflective to allow the metallic graphics to be fully appreciated. Poster will be mailed in durable 3-inch tubes. The entire project is the original concept and research of Dr. James Denito, DC, and is protected by United States copyright laws.

PURPOSE OF FUTURE HEALTH POSTER PROJECT

The tremendous interest in the United States in health care alternatives to allopathic drugs and surgery has now touched over half of all Americans. For example, more US citizens take nutritional supplements than those that don't.

This poster presents a comprehensive genealogy study of all the world's healing methodologies, past to present. The philosophical roots of these systems are shown colorfully and symbolically united as one complete, balanced image. This mesmerizing symbol is visualized above a distant planet, to take the reader away from their prejudices and limitations.

My research shows that man's attempts at methods of healing have all revolved around the three basic tenets of matter/energy. This is represented by the central triangle. I labeled the three sides in graphics that give the reader the "etched in stone" importance of those words. Without help from anyone but our own intuition, our control of health and disease is contained in the three-color quadrants within the triangle. You can see they basically describe good diet, physical exercise, and a spiritual belief system.

The information printed onto the symbol, seen only under close inspection, can teach the reader all the basic tenets of any health care system or method at a glance. This can be used by the doctor, patient, teacher or politician in promoting a swift and efficient transition into a universal health care system. A system all citizens of the world can use without fears, guilt, confusion or prejudice. The facts are plain and simple; we are all human mortal beings, with the unquestionable bond to live long and be without disease.

No single system or method is comprehensive enough to meet the needs of a society as diverse as planet Earth. This project has demonstrated the symmetry and balance of all Man's efforts at healing to date. It appears the puzzle is indeed complete. "Future Health" is a lesson in history.
